

GRAZING MANAGEMENT (CSP Enhancements)

April 2005

Enhancement Activity Task Sheet

WV-CSPEGM-TS

Clients Name:

Worksheet- 5 Stockpile Forage To Extend Grazing Season

Payment = \$5.00/acre/year/of pasture used for stockpiling forage to extended grazing by 60 or more days. Stockpiling is for late fall and winter grazing of tall fescue pastures. Remove livestock from planned stockpile area in mid July to August 7 and within 7 days apply 60 to 75 lbs of nitrogen/ac to insure adequate yield and quality of forage. Livestock may start grazing of stockpiled forages by Mid-November or after first killing frost (which ever comes earlier). Closely monitor availability of forage to assure adequate feed is available, provide adequate water for livestock especially during freezing temperatures. The stockpiled fescue may be closely (1-2") grazed to help maintain legumes in pasture. Consider divisional fence to improve grazing efficiency.

Pasture Name or Number <i>Example</i>	Acres Stockpiled	Fertilizer Application (Type, Amount and Date)	Dates	
			Livestock Removed	Start of Fall/Winter Grazing
#1	25	Poultry Litter/ 1 Ton /ac Aug.1,2005	7/28/05	11/16/2005

Grazing Management Assessment Certification

I certify that I have managed the stockpiling of the pasture as documented.
